

4. Project Planning Phase

4.1. Implementation Roadmap & Milestones

Phase 1: Requirement Analysis

Identify project objectives and collect requirements.

Define dataset and system requirements.

Phase 2: Data Collection and Preprocessing

Collect credit card approval dataset.

Clean, transform, and prepare data for training.

Phase 3: Model Development

Select machine learning algorithms.

Train and evaluate models using performance metrics.

Phase 4: System Implementation

Integrate the trained model with the application interface.

Implement prediction functionality.

Phase 5: Testing and Validation

Perform model testing and verify prediction accuracy.

Fix errors and improve performance.

Phase 6: Deployment and Documentation

Deploy the final system.

Prepare project documentation and user guide.
